

Recommended items for a Pandemic Pack (Kit) for General Practice

The pandemic pack (kit) has been put together to permit the practice to operate in a manner that extends the maximum protection to the clinical staff and patients.

The product selection has been harsh and only items that can evidence compliance to Australian/NZ Standards requirements or approval by TGA, NIOSH and Nelson Laboratories USA for particle size filtering or fluid “strike through” testing are acceptable.

In short all these components are compliant to International Requirements to combat the serious risks presented by an infectious disease outbreak. (A Pandemic)
