

HOSPITAL GRADE SURFACE SPRAY DISINFECTANT

SHIELDme™ is the leader in a new class of disinfectant and the most advanced around the world.

No alcohol, 100% natural and non-toxic means that Shield me™ is safe for humans and the environment. Begins to kill bacteria and viruses within seconds of contact and in only 30 seconds effectively kills COVID-19 assisting the clinical staff to perform the routine Infection Control process. Quickly. Learn more - view the Shield me™ clinical data page by visiting www.majacmedical.com.au

EFFECTIVELY KILLS COVID-19 - 30 SEC KILLS 99.99% OF BACTERIA*

100% NATURAL • NO ALCOHOL • NON TOXIC

- > Medical & Dental Surgeries
- > Hospitals and Clinics
- > Podiatry & Physiotherapy Clinics
- > Nursing Homes
- > Gyms & Fitness Centres
- > Office, Home, or Factory
- > Veterinary Practices

NEW PRODUCT
Handheld 1L automated sprayer for high speed disinfecting now available.

15 Litre Container - MSMD15
5 Litre Container - MSM05
500 ml Dispenser - Empty - MSM500E
250 ml Dispenser - MSM250
Handheld Auto Sprayer 1L - MSM1L

Made in Australia 

*Tested against P. aeruginosa, E. coli, S. aureus, E. hirae.
ARTG Number 343431

Marketed by: **Majac Medical Products Pty. Ltd.**

HOSPITAL GRADE SURFACE SPRAY DISINFECTANT

A REVIEW OF HYPOCHLOROUS ACID

J Oral Maxillofac Surg. 2020 Sep; 78(9): 1461–1466.

Published online 2020 Jun 25. doi: [10.1016/j.joms.2020.06.029](https://doi.org/10.1016/j.joms.2020.06.029)

Hypochlorous Acid: A Review

Michael S. Block, DMD** and Brian G. Rowan, DMD, MD†

PMCID: PMC7315945

PMID: 32653307

Abstract

The surgeon needs to have an inexpensive, available, nontoxic, and practical disinfectant that is effective in sanitizing against the COVID-19 (Coronavirus Disease 2019) virus. The purpose of this article was to review the evidence for using hypochlorous acid in the office setting on a daily basis. The method used to assemble recommendations was a review of the literature including evidence for this solution when used in different locations and industries other than the oral-maxillofacial clinic facility. The results indicate that this material can be used with a high predictability for disinfecting against the COVID-19 (Coronavirus Disease 2019) virus.

Recommendations for Office Use – Dental Practice

Importance of Aerosol Size to Disinfection & Application

Individuals working in the dental and medical field using surgical and high-speed handpieces are at risk from aerosolization. Aerosols are defined as particles less than 50 µm in diameter. Particles of this size are small enough to stay airborne for an extended period before they settle on environmental surfaces or enter the respiratory tract.⁴¹

⁴² Additionally, a true aerosol or droplet nuclei may be present in the air of the operatory for up to 30 minutes after a procedure.⁴¹

Particles are classified based on size: Coarse particles measure 2.5 to 10 µm; fine particles, 0.1 µm to less than 2.5 µm; and ultrafine particles, less than 0.1 µm. The nose typically filters air particles larger than 10 µm. If a particle is smaller than 10 µm, it can enter the respiratory system. If smaller than 2.5 µm, it can enter the alveoli. A particle smaller than 0.1 µm, or an ultrafine particle, such as the COVID-19 virus, can enter the bloodstream or target the lungs.

Sotiriou et al⁴² showed that the concentrations of small particles (<0.5 µm) generated during dental drilling procedures were much higher than the concentrations of larger particles (>1 µm). Ultrasonic and sonic transmission during nonsurgical procedures had the highest incidence of particle transmission, followed by air polishing, air-water syringe, and high-speed handpiece aerosolization.⁴³ One study found that ultrasonic instrumentation can transmit 100,000 microbes/ft³ with aerosolization of up to 6 ft and, if improper air current is present, microbes can last anywhere from 35 minutes to 17 hours.⁴⁴

Dental Practice: A study looked at disinfecting outpatient surgical centers using HOCl.⁵⁵ After cleaning, the rooms in the HOCl cleaning and disinfection study arm had significantly lower bacterial counts than the rooms that underwent standard cleaning and disinfection.
